Hintergrund und wissenschaftliche Fragestellung

Cluster of Excellence PhenoRob:
Robotics and Phenotyping for Sustainable Crop Production

Use Case 5: „Non-invasive phenotyping with autonomous robots“

Overarching agricultural research question:

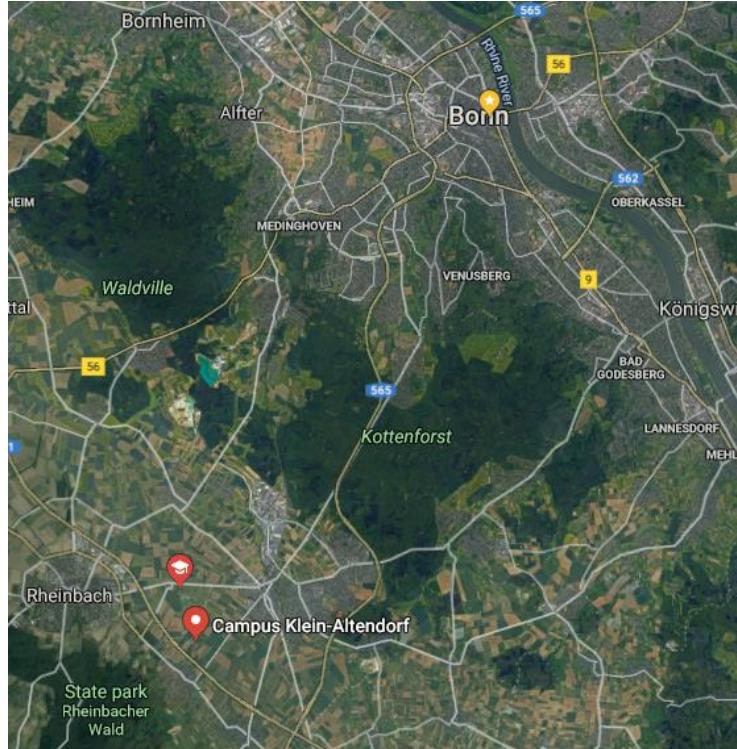

- How to **increase precision** of field interventions (weeding, fertilizing, ...) to achieve more **sustainability** in crop production?

Technological challenges:

- How to achieve **autonomous multi-sensor field robots** for **non-invasive plant phenotyping tasks**?
(E.g.: differentiation of weeds and crops, early detection of stress symptoms)
- Which combination of **sensors** and **algorithms** is optimal for detecting relevant **plant traits**?
 - sensor fusion
 - multi-modal machine learning

Hintergrund und wissenschaftliche Fragestellung

PhenoRob Central Experiment

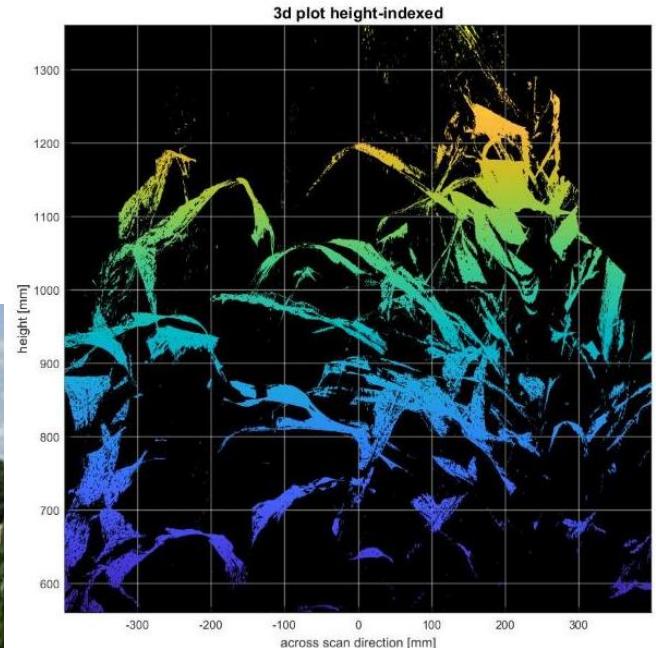

Hintergrund und wissenschaftliche Fragestellung

- Enabling an unmanned ground vehicle (UGV) to measure plant structure in the field.

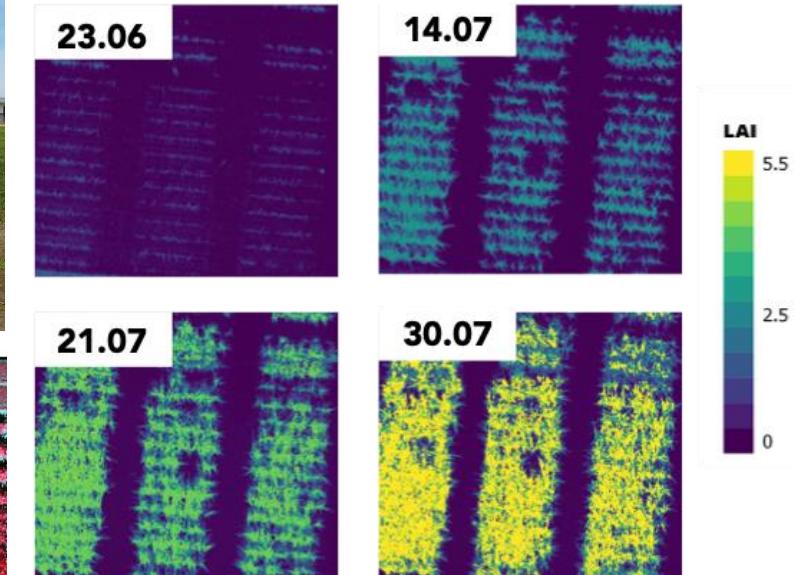

Hintergrund und wissenschaftliche Fragestellung

- 3-d plants with multi-color Plant-Eye on the FieldSnake (MSc project of Lars Zinken, supervised by Onno Muller)

Hintergrund und wissenschaftliche Fragestellung

- Imaging spectroscopy from UAVs to retrieve biochemical and functional plant traits (PhD project of Erekle Chakhvashvili; PI: Uwe Rascher)

Maps of Leaf Area Index of maize canopy; PhenoRob Central experiment

Hintergrund und wissenschaftliche Fragestellung

- Spectral electrical impedance tomography (sEIT)
in corn and sugarbeet (Valentin Michels & Andreas Kemna)

Build suitable cable construction
for mobile sEIT setup

Shielded, customized
cables

- plant phenotyping
- agricultural robotics
- plant, field, farm, region

- **harmonized data layers** that can be combined in a flexible way for different types of analyses
- appropriate **query interfaces and web services**
- **aggregated and simplified data views** (e.g., heat maps) for **on-site data visualization**
- explicit linkage of such views with **detailed representations** (e.g., 3d plant models)
- **reuse of data** acquired by agricultural field robots, e.g., by crop breeders

Generierter Mehrwert des Use Cases

Was existiert bereits?

data management infrastructure for research data within the PhenoRob project

- based on open-source software GeoNetwork (web-interface, file system for research data, metadata, user and group management)
- metadata schema developed based on MIAPPE, Dublin Core
- for now only project intern and for project partners
- in future: access for externals; datasets published with DOIs; upload only for PhenoRob members

Generierter Mehrwert des Use Cases

Was wird im Use Case realisiert (outcomes)?

- **harmonized data layers** that can be combined in a flexible way for different types of analyses
- appropriate **query interfaces and web services**
- **aggregated and simplified data views** (e.g., heat maps) for **on-site data visualization**
- explicit linkage of such views with **detailed representations** (e.g., 3d plant models)
- **reuse of data** acquired by agricultural field robots, e.g., by crop breeders

} services that are reusable for other projects
